EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Belk on 3/2/10.

The application has been amended as follows:

Claim 1. A display device comprising:

a display with a plurality of light emitting elements, and data lines for providing pulse width modulation signals to the light emitting elements; and
generating means coupled to the data lines for generating, during time intervals of a frame period, at least a first non-zero emission level during a first one of the time intervals and a second non-zero emission level during a second one of the time intervals, for reordering the time intervals non-sequentially within the frame period including the first and second time intervals in an order that reduces dead times between the time intervals, and for applying the first and second non-zero emission levels to a light emitting element in a time sequence determined by the reordered time intervals.

Claim 11. A method for driving a display device comprising a display with a plurality of light emitting elements and data lines coupled to the light emitting elements, the method comprising the steps of:

providing pulse width modulation signals to the data lines;

generating in synchronization with the pulse width modulation signals, during time intervals of a frame period, at least a first non-zero emission level during a first one of the time intervals and a second non-zero emission level during a second one of the time intervals;

reordering the time intervals non-sequentially within the frame period including the first and second time intervals in an order that reduces dead times between the time intervals; and

applying the first and second non-zero emission levels to a light emitting element in a time sequence determined by the reordered time intervals.

Claim 12. A display device comprising:

a display with a plurality of light emitting elements, and data lines for providing pulse width modulation signals to the light emitting elements; and

a controller configured to generate, during time intervals of a frame period, at least a first non-zero emission level during a first one of the time intervals and a second non-zero emission level during a second one of the time intervals, wherein the controller is configured to reorder the time intervals non-sequentially within the frame period including the first and second time intervals in an order that reduces dead times

between the time intervals and is configured to apply the first and second non-zero emission levels to a light emitting element in a time sequence determined by the reordered time intervals.
